INDIA'S POWER BACKBONE: OSWAL CABLES' FIVE-DECADE MASTERY IN CONDUCTORS, CABLES AND ENERGY INFRASTRUCTURE

Oswal Cables Ltd (OCL), one of India's most established names in power conductors and cables, is entering a new phase of expansion with a state-of-the-art manufacturing facility coming up at Mahindra World City, Jaipur.

Spread across 13.64 acres, the new plant will house advanced CCV and MVCC production lines, boosting OCL's capacity in LV and MV power cables and strengthening its position as a core contributor to India's rapidly evolving power infrastructure.

/// A LEGACY BUSINESS GROWING WITH REMARKABLE SPEED

Oswal Cables began its journey in 1971 in Jaipur (India), starting with basic aluminium conductors. For years, the company grew exponentially, unlike most family-owned industries, expanding capacity, adding new products, and building relationships.

What truly stands out is OCL's pace. Under third-generation leadership, it has delivered 37% revenue CAGR, nearly 50% EBITDA CAGR and 63% PAT CAGR, exceptional for a 50-year-old company in a traditionally slow, capital-

intensive sector. Beyond numbers, OCL has expanded its market presence, strengthened governance and evolved from core T&D products into renewables and energy storage.

OCL has earned several accolades, including the recent National Export Award – EEPC India 2023–24 for Highest Exports

What truly stands out is OCL's pace. Under third-generation leadership, it has delivered 37% revenue CAGR, nearly 50% EBITDA CAGR and 63% PAT CAGR, exceptional for a 50-year-old company in a traditionally slow, capital-intensive sector.

in Aluminium Products presented by Hon'ble Minister Shri Piyush Goyal and received by Manak Talera, Puneet Talera, and Sunil Singh, reflecting the vision led by Gaurav Talera.

/// FROM HIGH-PERFORMANCE CONDUCTORS TO A FULL POWER PORTFOLIO

OCL's evolution is anchored in its conductor business, built over five decades. From basic aluminium conductors, it now manufactures high-voltage conductors up to 765 kV, advanced variants like MVCC and export-grade solutions for demanding environments. Conductors remain its largest, most defining segment, powering transmission networks across India and global markets.

Building on its conductor expertise, OCL has developed a strong range of LV and MV cables, along with newer offerings such as solar DC cables and building wires, enabling it to serve both conventional grids and renewable projects. Its capabilities extend into EPC for transmission lines, substations, underground cabling and solar plants. With approvals from RDSO, UL, CPRI, ERDA and Kinectrics, OCL delivers solutions aligned with major global standards.

/// GLOBAL FOOTPRINT, RESPONSIBLE GROWTH

Today, OCL exports to 28 countries across Asia, Africa, the Middle East, North and South America, while serving customers across 22 Indian states. Its two manufacturing locations place it close to India's most active renewable corridors in the West and South.

The company's approach to sustainability is refreshingly practical: it generates two to three times the energy it consumes through wind and solar assets, including 4 MW of wind, 7.4 MW of solar, and 300 kW of rooftop solar. It's a simple principle: add more to the grid than you take.

/// STANDING AT AN IMPORTANT CROSSROADS

The two newly awarded Bikaner projects mark more than OCL's entry into storage, they hint at its next chapter. With expanding capacity, growing domestic and global presence, and leadership from Chairman Puneet Talera and MD Gaurav Talera, OCL is positioning itself at the crossroads of legacy engineering and clean-energy innovation. ■
